Figure 6: Expected (open dots with 1σ and 2σ bands) and observed (full dots) cross-section times branching fraction upper limits (95% CL) for the processes $PC$ as a function of the LLP mass; the LLP lifetime $\tau_{\text{LLP}}$ is indicated in each plot, $m_{h^0} = 125 \text{ GeV/c}^2$. The results correspond to the 8 TeV dataset.
